

## **REINFORCED WEAVE BELTS (DRW)**

### **PRODUCT DESCRIPTION**

This metal mesh is produced interweaving several spirals on the same direction (right or left hand) with its precedent.

It can be made of steel or stainless steel.

The endings can be welded or knuckled.

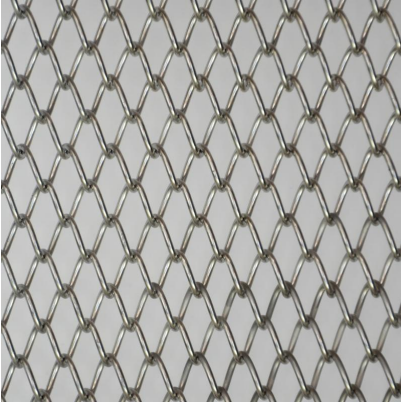

The characteristics of the spirals will depend on the product to be transported.

We recommend this mesh belt only for light loads.

For elevated temperatures, these belts can incorporate reinforced rods (ARR).
